

End-to-end network automation: ambitions and progress within the telecoms industry

To find out more about the research findings, please see the related thought leadership report [here](#).

Most telcos are automating to drive cost efficiencies and improve customer experience

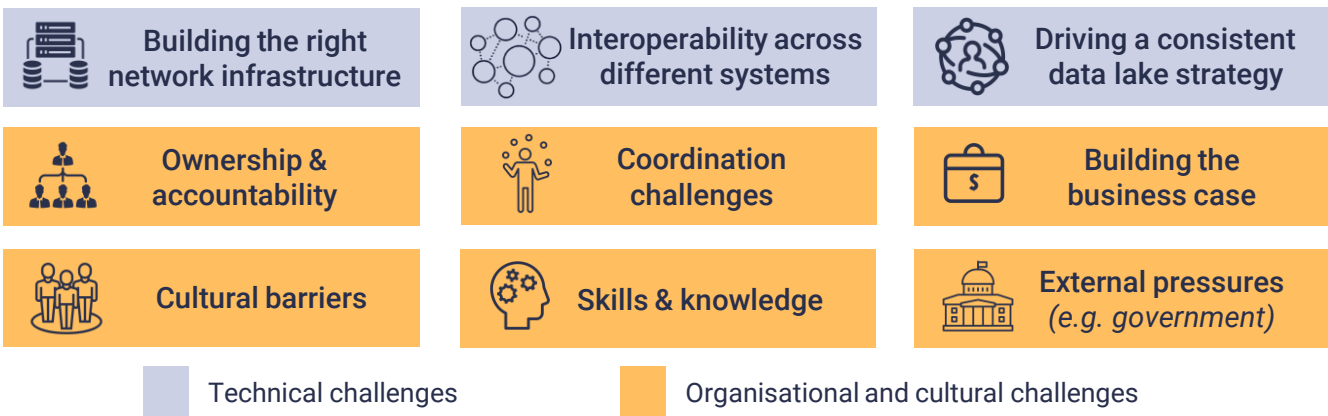

Main drivers for network automation

Other drivers include:

- Better resilience & reliability
- Better employee retention & satisfaction

The most pervasive challenges slowing down telcos' automation efforts are not technical

Many telcos have prioritised network automation efforts on new and 'high cost' legacy areas

There are four key ways for telcos to drive and accelerate their network automation journeys
